## Portfolio

### ERSI

ERSI is a one-stop shop providing engineering expertise, steel procurement, local manufacturing and on-site assembly of pre-fabricated, reinforced steel modules for major international infrastructure projects. ERSI's business model and value proposition to its clients is unique. Contractors tend to use a wide array of different suppliers for engineering, steel procurement, manufacturing and on-site assembly. In contrast, ERSI delivers an integral solution to contractors that encompasses all the activities in the value chain, reducing complexity for the contractor and providing certainty on costs. Headquartered in Europe, ERSI operates worldwide.
